Summary of Alerts

Risk Level	Number of Alerts
High	0
Medium	3
Low	6
Informational	4
False Positives:	0

Summary of Sequences

For each step: result (Pass/Fail) - risk (of highest alert(s) for the step, if any).

Alerts

Name	Risk Level	Number of Instances
Content Security Policy (CSP) Header Not Set	Medium	13
Cross-Domain Misconfiguration	Medium	1
Missing Anti-clickjacking Header	Medium	12
In Page Banner Information Leak	Low	12
Insufficient Site Isolation Against Spectre Vulnerability	Low	13
Permissions Policy Header Not Set	Low	12
Server Leaks Information via "X-Powered-By" HTTP Response Header Field(s)	Low	1
Unexpected Content-Type was returned	Low	11801
X-Content-Type-Options Header Missing	Low	12
Authentication Request Identified	Informational	3
Modern Web Application	Informational	12
Non-Storable Content	Informational	12
Re-examine Cache-control Directives	Informational	12

Alert Detail

Medium	Content Security Policy (CSP) Header Not Set
Description	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Instances	13
Solution	Ensure that your web server, application server, load balancer, etc. is configured to set the Content-Security-Policy header.
Reference	https://developer.mozilla.org/en-US/docs/Web/Security/CSP/Introducing_Content_Security_Policy https://cheatsheetseries.owasp.org/cheatsheets/Content_Security_Policy_Cheat_Sheet.html https://www.w3.org/TR/CSP/ https://w3c.github.io/webappsec-csp/ https://web.dev/articles/csp https://caniuse.com/#feat=contentsecuritypolicy https://content-security-policy.com/
CWE Id	693
WASC Id	15
Plugin Id	10038

Medium	**Cross-Domain Misconfiguration**
Description	Web browser data loading may be possible, due to a Cross Origin Resource Sharing (CORS) misconfiguration on the web server.
URL	https://minotaur.dev-avaxiagroup.com/api/health
Method	GET
Parameter	
Attack	
Evidence	Access-Control-Allow-Origin: *
Other Info	The CORS misconfiguration on the web server permits cross-domain read requests from arbitrary third party domains, using unauthenticated APIs on this domain. Web browser implementations do not permit arbitrary third parties to read the response from authenticated APIs, however. This reduces the risk somewhat. This misconfiguration could be used by an attacker to access data that is available in an unauthenticated manner, but which uses some other form of security, such as IP address white-listing.
Instances	1
Solution	Ensure that sensitive data is not available in an unauthenticated manner (using IP address white-listing, for instance). Configure the "Access-Control-Allow-Origin" HTTP header to a more restrictive set of domains, or remove all CORS headers entirely, to allow the web browser to enforce the Same Origin Policy (SOP) in a more restrictive manner.
Reference	https://vulncat.fortify.com/en/detail?id=desc.config.dotnet.html5_overly_permissive_cors_policy
CWE Id	264
WASC Id	14
Plugin Id	10098

Medium	**Missing Anti-clickjacking Header**
Description	The response does not protect against 'ClickJacking' attacks. It should include either Content-Security-Policy with 'frame-ancestors' directive or X-Frame-Options.
URL	https://minotaur.dev-avaxiagroup.com/boomi/connector
Method	GET

Other Info	
Instances	12
Solution	Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app. If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively consider implementing Content Security Policy's "frame-ancestors" directive.
Reference	https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-Frame-Options
CWE Id	1021
WASC Id	15
Plugin Id	10020

Low	**In Page Banner Information Leak**
Description	The server returned a version banner string in the response content. Such information leaks may allow attackers to further target specific issues impacting the product and version in use.
URL	https://minotaur.dev-avaxiagroup.com/boomi/connector/
Method	DELETE
Parameter	
Attack	
Evidence	nginx/1.27.5
Other Info	There is a chance that the highlight in the finding is on a value in the headers, versus the actual matched string in the response body.
URL	https://minotaur.dev-avaxiagroup.com/boomi/countries/
Method	DELETE
Parameter	
Attack	
Evidence	nginx/1.27.5
Other Info	There is a chance that the highlight in the finding is on a value in the headers, versus the actual matched string in the response body.
URL	https://minotaur.dev-avaxiagroup.com/boomi/custom_holidays/

Attack	
Evidence	
Other Info	
Instances	13
Solution	Ensure that the application/web server sets the Cross-Origin-Resource-Policy header appropriately, and that it sets the Cross-Origin-Resource-Policy header to 'same-origin' for all web pages. 'same-site' is considered as less secured and should be avoided. If resources must be shared, set the header to 'cross-origin'. If possible, ensure that the end user uses a standards-compliant and modern web browser that supports the Cross-Origin-Resource-Policy header (https://caniuse.com/mdn-http_headers_cross-origin-resource-policy).
Reference	https://developer.mozilla.org/en-US/docs/Web/HTTP/Cross-Origin_Resource_Policy
CWE Id	693
WASC Id	14

Low	**Permissions Policy Header Not Set**

Description	Permissions Policy Header is an added layer of security that helps to restrict from unauthorized access or usage of browser/client features by web resources. This policy ensures the user privacy by limiting or specifying the features of the browsers can be used by the web resources. Permissions Policy provides a set of standard HTTP headers that allow website owners to limit which features of browsers can be used by the page such as camera, microphone, location, full screen etc.

Low	**X-Content-Type-Options Header Missing**
Description	The Anti-MIME-Sniffing header X-Content-Type-Options was not set to 'nosniff'. This allows older versions of Internet Explorer and Chrome to perform MIME-sniffing on the response body, potentially causing the response body to be interpreted and displayed as a content type other than the declared content type. Current (early 2014) and legacy versions of Firefox will use the declared content type (if one is set), rather than performing MIME-sniffing.
URL	https://minotaur.dev-avaxiagroup.com/boomi/connector
Method	GET

Parameter	x-content-type-options
Attack	
Evidence	
Other Info	This issue still applies to error type pages (401, 403, 500, etc.) as those pages are often still affected by injection issues, in which case there is still concern for browsers sniffing pages away from their actual content type. At "High" threshold this scan rule will not alert on client or server error responses.
URL	https://minotaur.dev-avaxiagroup.com/boomi/connector/

Instances	12
Solution	Ensure that the application/web server sets the Content-Type header appropriately, and that it sets the X-Content-Type-Options header to 'nosniff' for all web pages. If possible, ensure that the end user uses a standards-compliant and modern web browser that does not perform MIME-sniffing at all, or that can be directed by the web application/web server to not perform MIME-sniffing.

Solution	The content may be marked as storable by ensuring that the following conditions are satisfied: The request method must be understood by the cache and defined as being cacheable ("GET", "HEAD", and "POST" are currently defined as cacheable) The response status code must be understood by the cache (one of the 1XX, 2XX, 3XX, 4XX, or 5XX response classes are generally understood) The "no-store" cache directive must not appear in the request or response header fields For caching by "shared" caches such as "proxy" caches, the "private" response directive must not appear in the response For caching by "shared" caches such as "proxy" caches, the "Authorization" header field must not appear in the request, unless the response explicitly allows it (using one of the "must-revalidate", "public", or "s-maxage" Cache-Control response directives) In addition to the conditions above, at least one of the following conditions must also be satisfied by the response: It must contain an "Expires" header field It must contain a "max-age" response directive For "shared" caches such as "proxy" caches, it must contain a "s-maxage" response directive It must contain a "Cache Control Extension" that allows it to be cached It must have a status code that is defined as cacheable by default (200, 203, 204, 206, 300, 301, 404, 405, 410, 414, 501).
